The whole year on one page

A perpetual Sol calendar. Print it once; it never goes out of date.

Mon	Tue	Wed	Thu	Fri	Sat	Sun

This grid is every Sol month. Each one has exactly 28 days and four full weeks, so a date always falls on the same weekday. The 13th is always a Saturday: Friday the 13th cannot happen.

The days outside the week. 13 × 28 = 364, so one day is left over: Year Day, after 28 December, belongs to no week and no month. In leap years a second one, Leap Day, sits between 28 June and 1 Sol. In those years April, May and June begin one day earlier on the ordinary calendar.
